

HRIS Email Notification Matrix

Client reference - production notification behavior

HRIS action	Recipient	Email content	Timing
HR updates an applicant's application status	Applicant	The application notification title and full body, including the new status and any HR note.	Normally within 1 minute
HR adds a remark to an applicant's application	Applicant	The notification title and the full HR remark.	Normally within 1 minute
HR approves or rejects a leave request	Employee	The leave-decision notification title and full body, including the decision and reason.	Normally within 1 minute
HR approves or rejects a profile-change request	Employee	The profile-change notification title and full body, including the decision and reason.	Normally within 1 minute
HR creates or updates an employee deployment	Employee	The deployment notification title and body, including the deployment details shown in HRIS.	Normally within 1 minute
Supabase Auth sends an invitation, confirmation, recovery, or account-security message	Account owner	Supabase Auth's own email template, delivered through the configured Brevo SMTP sender.	Auth-managed
Password change and all other in-app notification types	-	No additional HRIS workflow email. This avoids duplicates where Supabase Auth already owns the security email.	In-app only

Delivery notes

Workflow emails are sent by the scheduled notification worker. A valid job is normally processed on its next one-minute run. If Brevo is temporarily unavailable, the worker retries after 5 minutes, 30 minutes, and 2 hours, for a maximum of four attempts. Every workflow email also contains an optional secure link back to HRIS.

Brevo acceptance means the provider accepted the send request; it does not by itself confirm inbox delivery.
